

Optomap

Early signs of disease in the periphery of your retina can remain undetected when using traditional methods. The Optomap image is a unique technology that allows us to scan 80% of your retina in one panoramic image, without dilation. For this reason, our doctors strongly recommend that all patients have the Optomap procedure performed annually.

Optomap benefits:

- Allows our doctors to track your complete eye health for concerns.
- Facilitates early protection from vision impairment or blindness.
- Early detection of retinal disease more effectively and efficiently.
- Early detection is essential to reduce the risk to your sight and health.

Please check one of the following:

___ I choose to have the Optomap scan. I understand that based on the doctor's assessment of the retinal scan and examination, dilation may still be recommended. I understand there is a \$25.00 fee for this scan.

OR

___ I choose to be dilated today. I understand that after dilation, my vision may be slightly blurry when reading and might be light sensitive for 3-4 hours.
