

## QUANTIFEYE AND RETINAL PHOTOGRAPHY

Contact Lens and Vision is proud to present our patients with the most advanced technology in retinal screening today. Our doctors are concerned about major retinal problems like Macular Degeneration (AMD), Glaucoma, Retinal Holes and Diabetic Retinopathy. Systemic diseases such as High Blood Pressure or diabetes can be detected with a retinal exam. We recommend the following tests as an enhancement to your basic eye exam.

■ **Retinal Photos** are fast, easy, painless and do not require dilating drops.

The photos are recommended to all patients because they provide:

- An eye wellness scan
- An annual permanent record for your medical file

■ **QuantifEye** is a light response test that takes a few minutes and detects risk of AMD—the leading cause of blindness in the US. The effects of AMD are both permanent and irreversible. However, it can be managed by early detection with the use of dietary supplements and by wearing ultraviolet protection.

**Risk factors for this disease:**

Family history, smoking, light sensitivity, excessive sun exposure, female gender, light-colored eyes, inadequate consumption of green, leafy vegetables.

<b>QUANTIFEYE: \$39</b> NOT COVERED BY INSURANCE
