

Optomap

The Optomap is a **Digital Image of the RETINA**

This procedure will be done annually for every patient UNLESS a waiver is signed. For continued documentation, our doctors recommend that every patient have a digital image of the retina annually with the Optos scanning digital imaging system.

The fee is \$35.00 (Usually not covered by Insurance)

Digital imaging allows retinal conditions such as Macular Degeneration, Glaucoma, Retinal Holes, Retinal Detachment and Diabetic Retinopathy to be detected without dilation for most patients.

Early detection of these and other conditions is crucial.

Release of Liability for Internal Eye Health Exam

I have been informed that a thorough internal examination of the eye is integral to an eye examination. Without a thorough internal examination serious general health or eye conditions can be missed, and if untreated can result in loss of vision, complete blindness, or death.

_____ I **Choose** to have an internal examination of the eye by Optomap.

_____ I **Decline** to have an internal examination of the eye by Optomap (**Pupil dilation will be required**).
