

REVOLUTIONARY TECHNOLOGY

Impressive screenings challenging the standard of a basic exam.

The more advanced technology gets, the more detailed it gets. With more detail comes earlier diagnosis, better outcomes, and more efficient care.

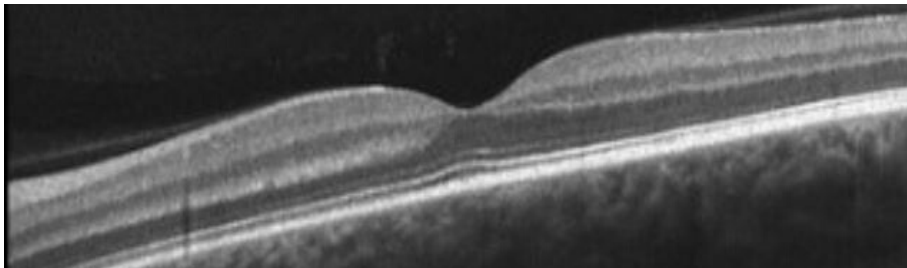

Previous Technology

This is the Retinal Imaging Optos. Perfect for seeing the surface of the eye and identifying immediate problems.

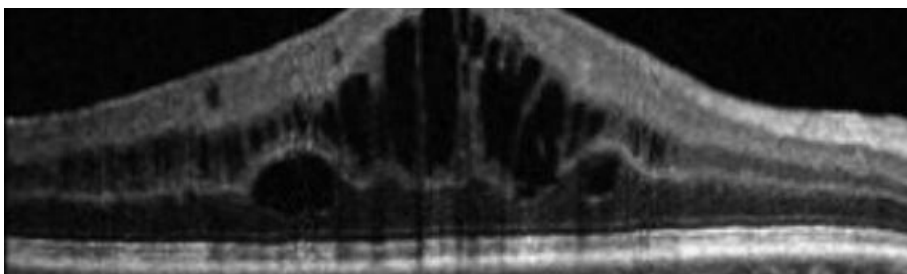

Current Technology

In the image above, this eye shows drop out of the small vessels in the retina indicating that there is inadequate blood flow.

A Normal OCTA

The OCTA shows the individual 10 layers of the eye.

An Abnormal OCTA

The OCTA captured disruptions in the layers of the retina that usually occur in the deepest layers first.

Why do I need an OCTA?

Your doctor recommends you & your family have this screening once per year. Risks increase if:

- 50+ years old
- High Blood Pressure
- Macular Degeneration
- History of smoking
- Diabetes
- Glaucoma
- Vascular Disease
- A prescription higher than a -3.00

ASK YOUR DOCTOR ABOUT THE OCTA TODAY!
