

Experience the Convenience of the Daytona Optomap Retinal Exam

The Optos Daytona provides an unequaled 200 degree view of your retina in a high-resolution, high-contrast digital image- the Optomap. This comprehensive view of up to 82% of the retina (in one image) gives our doctors the opportunity to identify and follow peripheral retinal pathology much more easily. In some cases, we can **now avoid the strong dilating drops during the exam.**

To provide the highest level of care, we strongly recommend that all of our patients have this procedure performed annually. It is especially important for people who have any or more of the following:

1. Headaches
2. Floaters, spots or flashes of light in vision
3. Family (or personal) history of hypertension or high cholesterol
4. Family (or personal) history of diabetes
5. Family (or personal) history of glaucoma
6. Family (or personal) history of macular degeneration or retinal disorders
7. Recent changes in vision
8. Vision not correctable to 20/20
9. Never had the procedure previously
10. Nearsightedness
11. Pregnant/Nursing

If pathology or unusual anatomy is documented with this testing, these image studies can be billed to your insurance as part of your treatment plan. This procedure (92250) will be billed to your "medical" insurance. **Deductible, Coinsurance, and/ or copay may apply.**

If the scans do not detect any unusual condition, then the photos will not be covered by insurance, and you are responsible for a fee of \$40.

The **optomap[®]** Retinal Exam is fast, easy, and comfortable.
