

Secure Message Portal

The Patient Portal is a secure web-based system that will allow you to receive communication from our office and access portions of your medical record online. Once you gain access to the Patient Portal, these services are available online anytime you want to log in and allow you to communicate with our office at your convenience.

1. At the beginning of the exam, we will ask for your e-mail address. This is where you will receive the e-mail with the information necessary to access the patient portal.
2. You will receive both the User ID and Password needed, as well as the link to the portal. Don't worry, if you need to reset the password, there is a link for that as well.
3. Once logged on, you may change the password and/or add/change your information.
4. You'll also be able to look at any and all of your exams from our office.
