

## Dilation Consent Form

In order for us to thoroughly evaluate your eyes we need to perform a dilated eye exam. Several eye conditions could go undetected without this procedure. This is recommended for all but especially patients with complaints of floaters, flashes, diabetes, and glaucoma. Dilation consists of placing drops in your eyes which start to take effect within 20 minutes. Once evaluated, the drops will cause possible blurred vision for 2-4 hrs. and light sensitivity (usually for 6-8 hours or less, but may last up to 24 hours). You should use caution when driving while your pupils are dilated. You should wear sunglasses or we can provide you with a pair.

❖ Please check one of the options below. \* **Reminder: Dilation is included in your examination\***

**I would like** a General Eye Exam, with dilation.

I understand the importance of dilation, however, at this time, **I decline** this part of the eye exam.

---

## Retinal Photo Consent

Joseph and Bass Eye Associates is pleased to offer a high-resolution digital photograph of your retina (the back of your eye). This tests allows the doctor to screen for but not limited to Glaucoma, Diabetes, Macular Degeneration, Optic nerve disease, neurological diseases and possible causes of headaches. Retinal photography allows the doctor to take a picture of your retina which aids in evaluation but also serves as a baseline for future exams.

This service is advised for healthy patients as well as patients presenting with pre-existing medical conditions. We strongly recommended for patients complaining of sudden changes in vision, headaches, flashing lights, and floaters

❖ **Retinal Photo**: The fee for this procedure is **\$29.00**. Please check one and sign below.

**I DO** wish to have retinal photography performed

**I DO NOT** wish to have retinal photography performed

**\*This service aforementioned is a screening. It is possible that additional, more comprehensive procedures may be necessary based on the results of your vision analysis.\***
